**SystemPlugin 2010 Compatibility:**  
DDMS; Coming Q3/Q4-2009 for Britannia, Red Cheetah, WinSol, SSI, Thalerus, QuickBooks

SystemPlugin, formerly named GoldLink, comes from a long line of tools which have been integrating backend system data with GoldMine for Office Products dealers since 2001. And ever since then, it's only gotten better and better. The 2010 version will be no exception.

Aside from existing built-in support for all of the latest editions of GoldMine Corporate and Premium Editions, SystemPlugin 2010 completely rewrote the playbook on all levels of data integration with GoldMine. To that end SystemPlugin 2010 will bring end users incredible new levels of data accessibility to your front office sales team.

There are new features sure to please all members of your staff. The following is a brief overview of new features:

- Invoice and line item details
- Vastly improved summary data for sales, gross margins and order/hit counts
- Many, many additional standard fields synced
- Standardized periodic stats logging
- And for equipment dealers, customer related data and equipment service history (not available on all backend systems)

All this amounts to a vast wealth of new information and data that sales teams will readily have access to for daily usage as well as for our SalesRabbit Dashboard service. Find out more by contacting your CRM International account representative today.

\* Initial product rollout will include plug-in for DDMS. Subsequent plug-ins will be released for other systems.
